

Energy Consumption Across UAV Policies

2D-AUTO (47 m)

Coupled-Greedy (ablation)

Strong-Coupled (deterministic)

Two-Stage (decoupled)

Equal budget $B = 83$ kJ: all methods spend within 4% of each other.

At that energy Strong-Coupled (deterministic) meets 67% of critical-node QoS vs 1% for 2D-AUTO (Fig. 5).

equal budget: within 4% of 2D
